

Eirik Marthinsen

SOFTWARE DEVELOPER/PHYSICIST

Oslo, Norway

☎ (+47) 415 14 840 | ✉ eirikma@gmail.com | 📷 marthinsen | 🌐 eirik-marthinsen

Father, husband, hobby skier and passionate software developer

Summary

Physicist/software developer with over 10 years experience. Mainly developing multiphysics simulation tools for the oil and gas industry, for simulating fire and fire response on process equipment. Responsible for building, testing, automation (DevOps), code analysis as well as implementing mathematical models.

Using C++ as my main language, and Python for supporting libraries and small tasks.

Passion for technology, with broad range of technical skills, long experience. I'm patient and like to work on hard problems. I'm focused on details and seldom give up before I'm satisfied with my work. As a colleague I'm nice and positive and hard working.

Skills

Programming C/C++ • Python • \LaTeX • Bash
Technical skills Git • Docker • Linux • Jenkins • Visual Studio
Languages Norwegian (native) • English (fluent) • German (beginner)

Projects

Brilliant / VessFire (C++)

DEVELOPMENT OF INHOUSE MULTIPHYSICS (CFD++) SIMULATION ENGINE

Petrell, etc
2012 - Present

- Adding features, thermodynamic models, command parsing, binary result file IO, ++
- Responsible for testing, automation (Jenkins) and build system etc.
- Modernizing legacy C++ code to modern safe and performant C++17 code (Clang-Tidy, etc)
- Implementing new license system with OAuth2 using cpprestsdk
- Cross platform Windows and Linux, compiling with Intel, MSVC, GCC and Clang
- C++ libraries Eigen/MKL, Sqlite, CppRestSDK, SQLite, Curl, GoogleTest
- Using tools like Visual Studio, Clang-Tidy, Clang-Format, Valgrind, address/UB sanitizers

PyBrf (Python)

PYTHON PACKAGE WITH MULTIPLE COMMAND LINE TOOLS FOR BRILLIANT SIMULATIONS AND RESULT ANALYSIS

Petrell, etc.
2018 - Present

- Binary result file parser using numpy to store large data sets
- Using modern Python 3.6
- Extensively tested with PyTest
- Ensure high code quality with pylint type hints and MyPy

BrilliantGUI / VessFireGUI (Qt/C++)

DEVELOPMENT OF SIMULATION CASE EDITOR AND RESULT VIEWER (3D VISUALIZATIONS AND GRAPHS)

Petrell, etc.
2018 - Present

- Upgrade legacy codebase from Qt4 to Qt5 and on the road to Qt6
- 3d visualization with Qt OpenGL, plots with QwtPlot

Fire Integrity Analysis of Flanges (Python, Brilliant, C++)

CREATE 3D PARAMETERIZED SIMULATION MODELS AND ANALYZE THE RESULTS

Diff. petroleum companies
2017 - 2020

- Automate the whole process of generating simulation models and run simulations (Python)
- Result analysis and presentation with Python using NumPy and Matplotlib
- Import from and export to Excel using python with xlswriter

Rupturing of pipes, High Temperature Material Testing (Python)

ANALYZE EXPERIMENTAL VIDEOS OF PIPES EXPOSED TO FIRE TO

- Using Python with OpenCV to fetch video file and read each frame
- Analyze each image frames brightness to detect pipe edges

Oil and gas company
2016 - 2017

Work Experience

Petrell AS

SENIOR ENGINEER

Trondheim, Norway
2012 - Present

- Developing inhouse multiphysics simulation software
- Performing fire-, structural integrity- and CFD simulations with the inhouse softwares Brilliant and VessFire
- Customer support, license

Internships at Petrell, Idéportalen, St. Olavs

Trondheim, Norway
2008 - 2011

Education

NTNU

MASTER OF SCIENCE IN APPLIED PHYSICS

Trondheim, Norway
2006-12

- Master thesis: *Modelling of thermal radiation for use in fire simulations* (at Petrell)
- Specializing in numerical physics
- Broad background in mathematics, physics, and data science.
